

3D PRINTED BALANCE GAMES

Students designed and shared 3D-printed balance games, blending creativity, engineering, and teamwork.

WEEK 1

PAPER TOWERS

Teamwork, communication, creativity, and problem-solving came together as students built the tallest freestanding paper structures using just seven sheets.

WEEK 2

EMPATHY CARDBOARD SIGNS

Designing for others encouraged empathy and purpose. Students researched ideas and created signs to help our school community.

WEEK 3

PAPER BOXES

Students measured, folded, and cut carefully to turn 2-D paper into 3-D forms, strengthening geometry, precision, and spatial awareness.

WEEK 4

BALANCE GAME INTRO

A small 3D-printed teeter-totter inspired new thinking. Students explored TinkerCAD, learning to test balance, adjust shapes, and share early ideas.

WEEK 5

MODELING PROGRESS

With growing confidence, students modelled their own balance pieces, practising patience, precision, and persistence.

WEEK 6

REFINING DESIGNS

Collaboration and troubleshooting took centre stage as students revised, improved, and supported one another through the design process.

WEEK 7

ADOBE POSTERS

Students used Adobe Express and AI tools to design posters showcasing their games, learning how visuals can communicate ideas and inspire others.

WEEK 8

WRITING INSTRUCTIONS

Teams wrote original rule sets and instructions, developing independence, clarity, and responsibility as they managed their time and shared ideas.

WEEK 9

PLAY-TESTING

Our Makerspace turned into a lively play zone! Students hosted, tested, and refined their games while practising empathy, adaptability, and confidence.

WEEK 10

SHOWCASE!

Students proudly presented their final balance games, teaching visitors how to play and celebrating creativity, teamwork, and real-world design impact.
